

Digital Go!

leetaewoo@digital-go.com

"Styleaudio" Hi-Fi USB Audio DAC from South Korea.

Simply saying, It makes your PC & Notebook to Hi-Fi Audio Component.

Many people like listening digital music using their PC or Notebook these days. However even though the original digital music source is high bit rated, the actual quality of sound is not good enough.

Why? Because the inside sound card is not good enough to enjoy listening the music and furthermore the electromagnetic noise exists pretty much in the PC & Notebook, which affects negatively to the quality of sound.

Our basic idea is to take out the sound card in the PC and locate it outside in the condition of "Noise Free" as the independent equipment. And, in order to make it as "Professional Audio Component", we designed and developed it as AUDIO EQUIPMENT, not COMPUTER DEVICE.

Connecting this equipment to their PC or Notebook, users can enjoy their digital music source in Hi-Fi Audio quality.

Professional Audio equipment, not Computer peripheral device!

Our engineering power is originated from Hi-Fi Audio components field, not from computer peripheral field. If you are Audio-Mania, you can easily understand which components we are taking for our product.

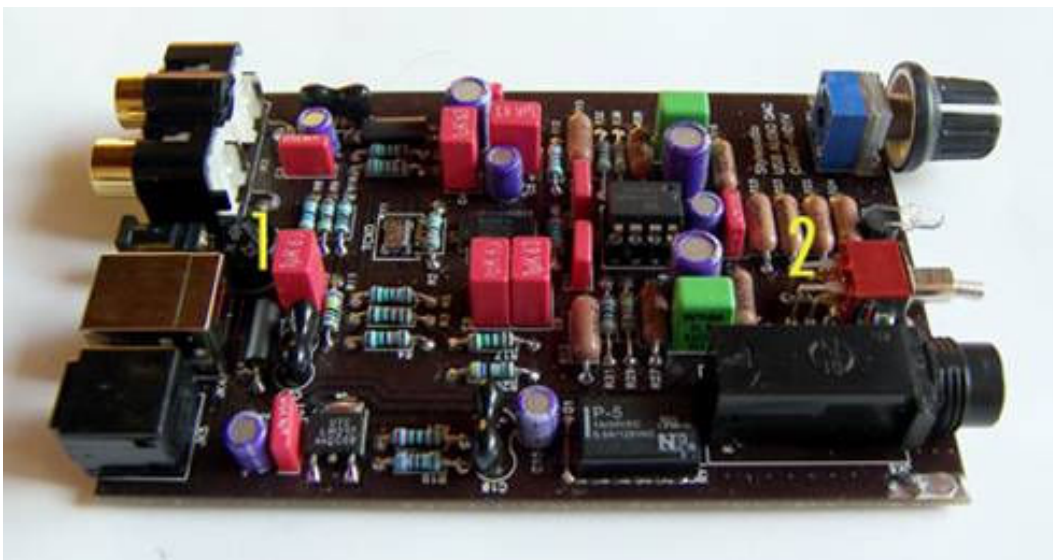

We are cooperating with Burr-Brown (USA), WIMA (Germany), OS-CON (Japan) who has absolute high reputation in Hi-Fi Audio field.

Also we take GOLD coating RCA jack for the connecting with Hi-Fi integrated AMP or high quality external speakers.

Of course users can connect their headphone directly, if they want. In order to reduce any kind of external noise and resonance as much as possible, it has full aluminum anodizing case and polyurethane rubber foot from 3M.
